Garden Guide

Spring

Soil

Turn the soil once it is dry enough to crumble in the hand, and mix in a layer of compost.

Seeds

Sow peas and lettuce early; beans and squash wait until the nights are warm.

Summer

Water

Water deeply twice a week rather than a little every day, so the roots grow down.

Pests

Pick snails off by hand in the evening, and let the birds deal with the rest.

Autumn

Plant bulbs for next year and leave the seed heads standing for the finches.
